This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

A

NEW BOOK OF INTEREST,

CONTAINING

ALIQUOT TABLES,

TRULY PROPORTIONED TO ANY GIVEN RATE,

COMPILED FOR THE USE OF THE

MERCHANT, BANKER, PUBLIC OFFICES,

And all other Perſons concerned in INTEREST ACCOUNTS.

Wherein is demonſtrated, by various ARITHMETIC CALCULATIONS,

THAT THE

TABLES, in all the common INTEREST BOOKS, conſtantly make the Intereſt LESS *than the true Amount*,

And that a Perſeverance in their Uſe, or calculating by the PEN, on the Principles they are compoſed, will, IN ALL INSTANCES, prove Injurious to the

PUBLIC REVENUE, to the BANK of ENGLAND, to COMMERCE,

To FUNDED PROPERTY, to PUBLIC COMPANIES, to the INDIVIDUAL,

And to the NATION *in general.*

By WILLIAM WALLACE, COMMERCIAL ACCOUNTANT.

PRESIDENT AND GOVERNORS 1938.

INTRODUCTION.

THE Tables in this Work are calculated by the Rule of Practice, and are nothing more than a renovation of that method of computing Intereſt, originally uſed by our Anceſtors; who, before the year 1730, were known to calculate (by the pen) the *aliquot* parts of a Year, broken into *Months*, *Weeks*, and *Days*, at which period Books of Intereſt were unknown; but the increaſe of paper credit, after that time, augmenting the neceſſity of Intereſt Accounts, TABLES were introduced into the Counting-Houſe, for the greater diſpatch of buſineſs.

The plan *originally* purſued in forming the Tables now in uſe, appears to be uniformly followed by each ſucceeding Author, who give one Table for MONTHS, and another for DAYS, without any regard to WEEKS. It is ſomething ſingular, that, at the introduction of thoſe Tables, the old method ſhould be altered, and no apology made for the innovation, nor any reaſon given for the omiſſion of the *weeks*; and what is ſtill more ſingular, no prefatory matter is introduced in any of theſe publications, to explain the principles on which their calculations are founded.

It will appear in the *aliquot* TABLES in this Work, that the Intereſt on 100l. for one Day, at 5 per cent. is 3½d. 2-7ths; but it is not to be inferred that 3½d. 2-7ths, is proportioned to the *Year* of 365 Days, but to the *Week* only, of which it is the aliquot part, being exactly 1-7th of 2s. 1d. which is the 1-4th of 8s. 4d. the Intereſt for one Month, which being the 1-12th part of a Year, equals 5l. the preſcribed rate; for was it proportioned to 365 Days, it would make the rate of Intereſt 5l. 8s. 7½d. inſtead of 5l. at which it is known to be calculated.

The *aſſumptive* Year, introduced in page 7, and in other places, is to be conſidered as nothing more than a *proof* or *evidence* of the calculations by PRACTICE, *on which the aliquot* TABLES *are founded.* By this rule, which divides TIME into aliquot portions of the Year, one Day becomes 1-7th of 1-4th of 1-12th of the ſaid Year; this compound fraction gives but 336 Days to the Year, but ſuch number of Days is *aſſumptively* introduced for no other purpoſe than to prove the truth and accuracy of the

the calculations by Practice; for it will appear on trial, that all amount of Intereſt, produced by a diviſor of 365, in the Rule of Three, will be exactly the ſame as would ariſe from 365, the Days in a natural Year, when the third term is made aliquot to the firſt; thus, if the Intereſt on the Month of 28 Days, equal to 1-12th of an *aſſumptive* Year, is required, the diviſor, 336, will produce exactly 8s. 4d. and if the Intereſt on the Month of 30,4166 Days, equal to 1-12th of a *natural* Year, is required, the diviſor, 365, will alſo produce exactly 8s. 4d.

In all calculations on DAYS *decimals* are required to make the third term aliquot to the firſt of 365 Days; for without ſuch equilization, a true anſwer can never be produced: From a neglect thereof ariſes all the ERRORS in the common Intereſt Books. This will be further ſeen on comparing the two methods of calculation in pages 7, 8, 10, 11, 13, which would not agree, were not the third term made aliquot to 365, by means of the auxiliary decimals; whereas the third term of the aſſumptive Year is, in all caſes, found already aliquot to 336 without ſuch aſſiſtance; and the Intereſt on any required time can therefore be readily produced by vulgar Arithmetic, and will always be ſeen to agree with the aliquot Tables in this Work, and Rule of PRACTICE.

Though this aſſumptive Year appears to give but 28 Days to the Month, it in reality contains 1-12th part of 365, or 30,4166 Days, which are equal to one calendar Month. It is therefore not to be inferred, that Intereſt is calculated to the *Lunar*, inſtead of the *Solar* Year; for was Intereſt calculated to the *Lunar* Year, it would make the amount even LESS than what is at preſent produced by the common Books; whereas the aliquot Tables make it MORE. A *Lunar* Year is known to conſiſt of 13 Months, in which caſe the Intereſt on one Month would be but 7s. 8¼d. or 7¼d. leſs than it ought, and in no compariſon would be found to agree either with the common Intereſt Books, or the aliquot Tables herein introduced; a plain evidence that the *Lunar* Year has not the leaſt affinity to either.

Theſe Tables being principally intended for the *Counting-Houſe*, are therefore addreſſed to the *Merchant* and *Banker*, who, by their general introduction, cannot fail to experience the advantages intended by the Author, and thereby daily diſcover the injuries which, for many years paſt, have ariſen to their capital by the uſe of the common Tables of Intereſt.

TO

TO THE

MERCHANTS AND BANKERS

OF

GREAT BRITAIN AND IRELAND.

GENTLEMEN,

BOOKS on Intereſt have for many years been *ſuppoſed* uſeful to the Merchants and Bankers, in eſtimating their Accounts Current, and had they been calculated on proper principles, would have enſured that conſtant approbation and protection they were ſuppoſed to deſerve.

It is the known cuſtom in calculating Accounts Current, &c. to calculate on months, and the broken parts of the month are reckoned days; to ſolve the one, the Intereſt under months is ſought, and to ſolve the other, the Intereſt under days.

From this proceeding, the great loſs which has attended all Merchants and Bankers, in their calculations, has ariſen in the *firſt* inſtance, and from the *erroneous* calculation on the days has ariſen the loſs in the *ſecond* inſtance.

I would not be underſtood to caſt the leaſt reflection on the abilities, and long labours, which muſt have attended thoſe ingenious men who have compiled the preſent Books on Intereſt; they appear to be very accurate in their ſolutions, but are fundamentally *wrong in their principles*, and from ſome ſtrange cauſe, theſe errors have many years paſſed unnoticed, and conſequently undiſcovered, to the *great injury of the* CAPITAL both of MERCHANT and BANKER.

In addition to, and in ſupport of what is above advanced, I ſhall, *Firſt*, Arithmetically demonſtrate, that the calculations on the *Days* are not only *erroneous*, but *below* the real amount; and conſequently ſo much as theſe calculations are under value, ſo much muſt the Account Current be deficient. *Second*, The CAUSE will be ſhewn from whence theſe Errors have ariſen; and, *Third*, The certain means will be pointed out, by which they may in future be avoided, and the calculations become TRUE, LEGAL, and CERTAIN.

As an Introduction to the proof of this *material and intereſting* DISCOVERY, let it be admitted that the Intereſt on £.4767 0 0 is required for 11 months 26 days, at 5 per Cent.

By the preſent Intereſt Books, the Intereſt on 11 months is	£.	218	9	9
By ditto - - - - - - - - - - on 26 days, - -		16	19	6½
		235	9	3½
By Wallace's Book of Intereſt ditto 11 months,		218	9	9
By ditto, - - - - - - - - 3 weeks 5 days,		18	8	10½
		236	18	7½
A Difference in Calculation, - - -	£.	1	9	3½

Hence it appears, the defect ariſes from computing the broken parts of the month by *days*, inſtead of *weeks* and *days*.

For *all Intereſt*, if truly calculated, muſt be from the *aliquot* parts of a year of 12 months, and therefore, *months*, *weeks*, and *days*, muſt be progreſſively broken from the Intereſt on a year; for a contrary proceeding is injurious to calculation; becauſe different *diviſors* cannot be applied to the ſame integer; for *unity* affords but one and the ſame denominator, without producing a poſitive ſoleciſm in arithmetic: Whereas the preſent Intereſt Tables, ſuppoſe a diviſor of 336 to find the intereſt of the months, and 365 to find the intereſt of days.

This will appear on the computation of 11 *months*, if brought into *days*, for the ſum £.218 9 9, the intereſt thereon, implies 11 months of 28 days each, equal to 308, which demands 336 the diviſor, to produce the *true Intereſt*; for were the real number of days contained in the 11 months, which are 334, to be introduced, they would

would demand 365 for the diviſor, which would produce 7s. 8d. leſs than the real intereſt.

It is therefore evident, that in the INTEREST BOOKS *the calculations on the months imply a diviſor of* 336, *and that on the days a diviſor of* 365; the fallacy of which proceeding is ſhewn in the following calculation.

Nov.	30
Days,	334

Could nothing elſe be adduced in proof of the fallacy of the preſent Intereſt Books, the above calculation at C would be *alone* ſufficient; for I have there progreſſively given the *real* number of days in the 11 months, which are 334: If the intereſt therefore on £.4767 ſhould be ſought for under the computation on days, it would be found £.218 2 1: Yet, if the intereſt for 11 months is ſought for under months, it will be found £.218 9 9, being a difference of 7s. 8d. thereby making the ſame book give different

different anſwers to one and the ſame queſtion.---*Thus the very book militates againſt itſelf, and confeſſes its own* ERRORS *and* IMPROPRIETY.

The above muſt carry conviction, even to a perſon unacquainted with figures; but as a ſtill further proof, that cuſtom immemorial has ſuppoſed 12 months of 28 days each, in the computation of intereſt, let compariſon be made of the intereſt on the 26 days, in the calculation A, and it will be found that a diviſion of 365 continues alſo to produce *an anſwer below value*, viz.

F

The above is a proof of the diſagreement between the common Intereſt Books and mine, the difference being £. 1 9 3¾ againſt true calculation; and indeed there is no inſtance where the Factor or Diviſor 365 can be applied, except where the parts of the

the year can be found *aliquot*, as will ſpeedily be ſhewn, while the above diviſion by 365, ſerves further to confirm the remarks under calculation C.

As a further corroboration of the truth of theſe remarks, and to prove the diviſion by 365, to find the intereſt for days will, in every attempt, be erroneous, I ſhall turn my attention from the Counting-houſe to the PUBLIC FUNDS, where ſuch diviſors will alſo appear equally *inadmiſſible* and *abſurd*.

The Public Funds are alſo neceſſary to be brought forward in ſupport of what is herein advanced, becauſe Government muſt unqueſtionably be ſuppoſed accurate in calculation, for was it otherwiſe, the number of able Arithmeticians, which Europe produces, would ſoon have diſcovered their fallacy: Moreover, on the eſtabliſhment and progreſſion of the Funds, the Calculations on their *Intereſt* and Value, have, from time to time, been examined and confirmed by the moſt eminent men; and to Mr. LOCKE, and Sir WILLIAM PETTY, the nation, at this time, ſtands indebted for many refined and curious remarks thereon: INTEREST was then known to be calculated by our FATHERS, by *years*, *months*, *weeks*, *days*; but within theſe 60 years, their *wiſer* SONS, have ſo completely refined on their principles, as to ſubſtitute a ſpurious and imperfect method, which has been received in *preference* to that perfection which heretofore prevailed, and to the *manifeſt* injury of the CAPITAL *of the Merchant and Banker, during that period, of many* THOUSAND POUNDS.

Adverting to the FUNDS; let it be ſuppoſed, that a perſon goes to receive half a year's dividend on £. 100 (ſuppoſe) 3 per cent.

For this dividend it is readily ſeen he receives 30s. This ſerves further to confirm the calculation at B: for theſe 6 months, are *implied*, or *aſſumed*, to contain 6 times 28, or 168 days; the half of 336, for no other diviſor will produce the ſum received: For were the regular days produced in the 6 months, and divided by 365, the product would be deficient, as will appear in comparing theſe calculations, viz.

Days calculated.

Jan.	31
Feb.	28
March	31
April	30
May	31
June	30
Days	181

Hence in this ſmall matter is a difference of three-pence, and ſerves further to confirm the remarks on calculation C.

It may be perhaps remarked, that by this calculation the year only conſiſts of 336 days, and that, thereby, there is a loſs of intereſt on 29 days; but the contrary is the fact, the loſs being imaginary. For it is evident, that if 30 ſhillings are received for 6 months intereſt, it is certainly received for the number of days contained in thoſe 6 months; therefore, if 30 ſhillings are received for the Midſummer dividend, 181 days intereſt is moſt clearly received; and if 30 ſhillings are received for the other 6 months, 184 days intereſt is alſo received, compleating the 365.

The reaſon, or CAUSE why 336 is, and *ought to be*, the common diviſor, inſtead of 365, for finding the intereſt of days, is clearly elucidated by the following remarks.

It will firſt be ſhewn that 365 will, in no inſtance, anſwer for a diviſor, but where the *aliquot* parts of the days can be taken; this can be done in no inſtance on 365 days, without the aſſiſtance of decimals, excepting the number 73, which produces exactly 1-5th.

I ſhall therefore bring ſome proofs, to ſhew that had the year been decimally divided, 365 had been the proper diviſor, and that the defects which have ariſen, have proceeded entirely from the omiſſion of ſuch decimals, *and from that* ONLY.

For

For if the value of 6 months is found, it produces 182,5 days.
3 months, - - - - - - 91,25 ditto.
1 month, - - - - - - 30,4166

In addition to the above proofs, I ſhall demonſtrate that the calculation C, is defective in 7s. 8d. from the omiſſion of the decimal, and *from that cauſe only*.

EXAMPLE.

Find the intereſt of £. 4767, for 11 months, the integer 365 days.

The intereſt for a year is, - - - - - £. 238 7 0
The decimal for 11 months - - - - 334,58

236

This produces the difference 7s. 8d. occaſioned by the addition of the decimal 58, and makes it correſpond with the anſwer B, excepting the fraction of a farthing, which could alſo have been produced, had the decimal been extended.

Here it is plain, that 365 becomes a diviſor equal in its ſolution to 336, and will be ſo in all caſes, where the aliquot parts can be taken, but in no other inſtance whatever, hence ſuch diviſor becomes *partial* only, whereas 336 becomes a more *general* diviſor, and will always be found to correſpond with the calculation by months, when that number of days is *implied* to be contained in the year. *See calculations* E. F. G.

That 336 is the moſt true and proper diviſor, appears alſo by comparing calculation I. with calculation G. which immediately correſpond; and as a further evidence of this fact, the following operation demonſtrates, that 336, the days in the *implied* year, bear the ſame proportion to 168, the days in half an *implied* year, as 365, the days in a *natural* year bear to 182,5, the decimal of the days in half a *natural* year.

The remainder 168 produces the fraction $\frac{168}{336}$=decimal ,5, and conſequently the anſwer is 182,5 days, the exact portion of half a natural year.

The EFFECT, and conſequent Loss, to the MERCHANT and BANKER, by the uſe of the preſent Intereſt Tables, being thus clearly ſhewn in a variety of collateral proofs, I ſhall, as an additional confirmation of the facts, further demonſtrate the CAUSE why the diviſor 365, in ſeeking the intereſt for days, always brings the ſolutions erroneous, and conſtantly LESS than the true amount, by means of the following

COROLLARIES and ELUCIDATIONS.

Every dividend muſt become exactly equal to its diviſor, to produce the integer from whence the diviſor is broken.

Every dividend being the numerator of a fraction, ſuch dividend, when compoſed of a number of parts, equal to the denominator or diviſor, deſtroys the fraction, and produces unity, thus, 365÷365=1.

If the dividend is not compoſed of ſome *aliquot* part of the integer, the ſolution expected from the combination of its numbers, (where ſuch integer is the diviſor) muſt be *anomalous*, becauſe where no aliquot parts can be formed, a *fraction*, or remainder, will always ariſe.

Fractions, ſo produced, muſt therefore be *decimated*, or the dividend cannot be an aliquot part of the diviſor.

The aliquot parts of a year, where 365 is the denominator, can, in no inſtance, be found without a *decimal*, excepting the number 73, which is 1-5th, for $365 \div 73 = 5$.

The cauſe of the errors in the calculation of intereſt by *days*, will conſequently be found to ariſe from a neglect of ſuch *decimal*, to make the dividend an aliquot of the diviſor.

Therefore the intereſt on any number of DAYS, *where ſuch decimal is wanting to make them aliquot, except* [73] *will, in every inſtance prove* FALSE, *producing always* LESS *than the real amouut, and never correſponding with the calculation on* MONTHS.

But [73] being aliquot, without the aſſiſtance of a *decimal*, the intereſt ariſing therefrom, will be found to exactly correſpond with the calculation by MONTHS: This ſerves further to prove *the neceſſity of ſuch equalization*; for in no other inſtance will the calculation by DAYS agree with the MONTHS, *conſidered as the aliquot parts of a year*.

This difference ariſes from two denominators being given to the ſame interger, 336 being applied to the month, and 365 to the days.

For when denominators, of the ſame integer, are not homologous, they are known to be arithmetically ſophiſtical.

The denominators 336 and 365, not being homologous, every ſolution produced by a combination of their numbers, in theſe calculations, will conſequently be ſophiſtical and disjunctive.

But in the following collateral proof, that 73 days correſpond with the calculation by

by months: The denominators will be found perfectly homologous, for 12 calendar months are exactly equal to 365 days, and therefore one and the same answer will be produced from each, viz.

PROOF.

Calculated by Months.

£.5 Int. for a Year.

M. W. D.			
2 0 0	1/6	16	8
0 1 0	1/8	2	1
0 0 1	1/7		3½ 2/7
	1 1/7		3½ 2/7
	1 1/7		3½ 2/7
	1 1/7		3½ 2/7
1/5 of a day			½ 5/4
		£. 0	19 11½
Fractions,			½
		£. 1	0 0 Y

The fractions will be found equal to the halfpenny which appears deficient, by adding $\frac{8}{7}$ to $\frac{4}{5}$ which will produce $\frac{28 \quad 40}{35}$ equal to $\frac{68}{35}$ ſufficiently near to *two farthings*, to prove the truth of the calculation.

It may be obſerved in calculation Y, that 2 months, 1 week, and 4 days, are equal but to 71 days inſtead of 73; for if 365 is divided by 12, it will only produce 30, becauſe the remaining 5 cannot be divided, unleſs it is decimated; and for the ſame reaſon, 7 days can only be allowed to the week; hence 71 days can only be proportioned by *whole numbers* to 2 months, 1 week, and 4 days of a calendar year.

But ſuch oejection is inſtantly removed; for if the denominators in the operations W and Y contain one and the ſame number of parts, the two numerators, as before obſerved, muſt bear aliquot parts of ſuch denominator; and it is plain that ſuch porportion is herein maintained, for 73 days contain the 1-5th of a year; and it is equally evident

evident, that when 2 months, 1 week, 4 days, and 1-5th of a day are conſidered decimally, they will be found to contain exactly 73 days, and conſequently alſo equal to 1-5th of a calendar year; therefore in both the calculations, 365 becomes the common denominator, while the aliquot parts of each numerator bears an equal proportion to ſuch denominator, of which the following is the

PROOF.

Two months will produce the decimal -	60,83
One week - - - - - - - - - - -	7,6042
Four 1-5th days - - - - - - - -	4,5658
	73,0000 = $\frac{73}{365}$ or $\frac{1}{5}$ of a Year.

Hence, it is plain, that if the above decimals were not produced, the calculation would, in *reality*, have been but on 71 days inſtead of 73; for ſuch decimal parts being immerſed in 1 month, 1 week, 4 days and 1-5th, the calculation would evidently have been two days ſhort of the *true amount*, had not ſuch decimals been therein introduced, and the ſolution of Y would (in that proportion) have been leſs than the ſolution of W. Theſe decimals, in like manner, conſtantly fluctuate in the dividend (in various proportions) of the calculation of the days; and it will be ſeen, that the ſame *ratio* which the decreaſe of the dividend bears to the diviſor, the decreaſe of the quotient will be always found to bear to the true anſwer.

It appears that 5 days are conſtantly loſt in the calculation of the intereſt by days; which 5 days are contained, in certain proportions, in *every dividend*, and in ſuch proportions will the anſwer always be found *to be leſs than* the true amount.

PROOF.

365 Days ÷ 12, the months in the year, = 30 5-12ths (*i. e.*) 30 days and 5-12ths of a day are contained in one calendar month.

If 5-12ths of a day are loſt in every month, it follows that 12 times 5-12ths are loſt in a year, which produces the *improper* fraction 60-12ths, exactly equal to 5 days.

In

In further confirmation of the fact, it appears in calculation L, that the decimal of one month is 30,4166, therefore the decimal parts of ,4166 being deficient in every month, will alſo prove the loſs of 5 days in the year, viz.

Value the decimal ,4166 the integer a calendar year,

12

4,9992=5 days.

This regular loſs of 5 *days, conſtantly fluctuating, and decreaſing the dividend in various proportions, is the certain, and only* CAUSE, *that the intereſt calculated on days by a diviſor of* 365, *without the inſertion of ſuch decimal, muſt always abate in a ſimiliar proportion to the decreaſe of the dividend, and conſequently be always* LESS *than the real amount.*

In whatever point of view we conſider the amount of intereſt in the calculation on days by the preſent intereſt books, they will prove not only to be founded on falſe principles, but alſo conſtantly leſs than the real amount; which imperfections have been ſo clearly explained, that *the* FACT *cannot be* REFUTED *by the power of numbers*, for arithmetic and geometry admit of no *perhaps*, no *ſuppoſe*, nor *may be*: Demonſtration carries a conviction which no arguments can remove; it muſt therefore be clearly ſeen and acknowledged, that making 365 the diviſor, in computing the intereſt on days, will not only produce a fallacious anſwer on the days, but will, in no inſtance, correſpond with the calculation on months; and therefore ought never to be admitted where a true ſolution is expected, but, on the contrary, every calculation ought to be made by YEARS, MONTHS, WEEKS, and DAYS, *and thoſe days taken as the component parts of the week*, by which method of proceeding, the anſwer will always be found arithmetically juſt.

Although ſufficient has been already ſaid, to prove the fallacy of all intereſt books in their calculation on days; yet as every reader may not be ſo perfectly acquainted with decimal computation as to reconcile it to conviction, I ſhall, for the greater ſatisfaction of ſuch perſons, bring the following operations into common arithmetic; wherein it will alſo plainly appear, that 336 truly anſwers to a calculation by days, and correſponds with the parts being broken by months, weeks, and days, which neither 365 nor any other number can produce, viz.

Find the intereſt of £.100 at 5 per cent. for 3 years, 7 months, 3 weeks, 5 days.

The ſtating will be as follows, viz.

N

The defenders of the preſent intereſt books, may perhaps ſay, that inſtead of 12 *months* in the firſt *term*, it ſhould be 365 *days*; but ſuch objection would be not only frivolous, but incompetent to the true *ratio*; for it is well known, that the firſt and third TERM muſt not only be in the ſame denomination, but alſo, that the *firſt* term muſt bear the ſame proportion to the *third*, as the *ſecond* does to the *fourth*; but ſuch terms

terms cannot be *analogous*, unleſs produced by the ſame FACTORS; indeed 365, in theſe inſtances, can be produced by *no regular gradation of numbers*; but, that every ſcope may be given to every objection that may be ſuppoſed to ariſe againſt theſe calculations, the above ſtating ſhall be worked by 13 months to the year, and even in that caſe the anſwer will be 5s. 1d. leſs than the truth.

O

The following Tables will be found calculated by Months, Weeks, and Days, taken as part of a week; and as an additional and concluſive teſtimony of the ſuperiority of this mode of calculation, and the inaccuracy of that by days, taken as parts of a year, I have, *in page* 22, given a comparative ſtatement of the intereſt ſuppoſed to ariſe on an Account Current, wherein the progreſſive *increaſe* by my calculations diſtinctly appears; and the cauſe of ſuch *increaſe* is plainly ſeen to ariſe from computing the broken parts of the months, by weeks and days, *taken as the component parts of a week*, while that of the *decreaſe* as plainly appears to proceed from the computation being made on the broken parts of a month, *taken as the component parts of a year*, for the months in both calculations uniformly agree.

This fact is clearly elucidated in the ſaid Account Current, where in the laſt article of £.2611 0 0, though it has only 23 days intereſt, yet, evinces a difference of £.0 14 6¼, and had there been the additional intereſt of *eleven*, or any other number of months, there would have been found no greater difference between the two calculations than what now appears, for the conſequent increaſe of the aggregate ſum (in proportion to the months) would be alike in each.

Having thus clearly and arithmetically demonſtrated the exiſtence of thoſe ERRORS, which have for ſo many years prevailed in the preſent *intereſt books*; and, at the ſame time, with equal certainty, demonſtrated *the ſuperior accuracy of the preſent* TABLES, and the certain benefits which muſt ariſe from their introduction, it is hoped they will receive the approbation and encouragement of the MERCHANTS and BANKERS of Great Britain and Ireland, for whoſe uſe and advantage they have been principally compoſed.

A COMPARATIVE

A COMPARATIVE STATEMENT

OF AN

ACCOUNT CURRENT,

CALCULATED ON THE ERRONEOUS PRINCIPLES OF THE COMMON

INTEREST BOOKS,

AND BY THE FOLLOWING TABLES,

WHEREIN

A LOSS is clearly demonſtrated to have conſtantly ariſen, and muſt evidently continue to ariſe, to the MERCHANT and BANKER, by computing their Intereſt Accounts from any of the preſent Publications on that Subject.

A COMPARATIVE STATEMENT

OF THE

DEBIT OF AN ACCOUNT CURRENT,

Made up to 30th JUNE, 1793,

By the COMMON INTEREST BOOKS.

1793.		£.	s.	d.					M.	D.	£.	s.	d.

												£. 352	6	7

Admitting a merchant's connection ſhould be ſo ſmall, as not to make up more than to the amount of *twenty* ſuch accounts in a year, he would be an annual ſufferer of £. 300; and in the laſt ten years, muſt have *ſuſtained* a loſs of £. 3000, a ſum that perhaps may not be thought unworthy the attention even of the moſt opulent.

And,

And, if in a commerce ſo limitted, this ſum is annually loſt, what muſt not have been the injury to many of the firſt Mercantile and Banking Houſes in Great Britain, where the Intereſt Accounts are known to ſwell to ſo large an *annual* amount, that nothing but an intimacy with the interior of a Counting Houſe can reconcile to belief. To theſe gentlemen, this diſcovery muſt cauſe a very ſerious retroſpection to the *many thouſands* in which their capital has been injured during the laſt 20 years, by uſing the preſent Books on Intereſt.

To this injury, they experience a ſecond, viz. that on ſtriking the balance of theſe *Accounts Current*. Such balance being, in conſequence, carried to the debit of the new account, and known to bear intereſt until it is diſcharged, it plainly follows, that ſo much as the balance ſo carried ſhall be ſhort of the true amount, ſo much the capital of the merchant ſuffers an additional injury, not only in *the principal ſum* ſo carried forward, but alſo on the amount of the intereſt, which regularly would have ariſen thereon, in the courſe of the running year.

In common bonds, or in ſingle computation, the defects in the Intereſt Books might, perhaps, have been overlooked, becauſe the difference, when diſcovered, might not be thought worth notice; but when this defect is applied to the Counting Houſe, where the calculations are numerous, it cannot but become deſerving the *moſt ſerious attention*. The calculators of the preſent Intereſt Books, although they may be good accountants, appear by no means to be *commercially* ſo; therefore, the wonder is, not ſo much that theſe authors have compiled an *improper work* for the Counting Houſe, as that, among the number of Merchants and Bankers in theſe kingdoms, many of whom are unqueſtionably good arithmeticians, *theſe* ERRORS *have been ſo long over looked.*

OBSERVATIONS

OBSERVATIONS

ON THE

FOLLOWING TABLES.

THIS Book of INTEREST being principally compoſed for the COUNTING-HOUSE, the Intereſt is calculated at 5 per cent. being the rate uſed by all the MERCHANTS, and by the greateſt part of the BANKERS; but that the preſent publication may be of *general* uſe, a conciſe method is given at the end of theſe Tables, for readily finding, *by means thereof*, the Intereſt of any ſum for any time, at SIX, FIVE *One Half*, FOUR *One Half*, FOUR, THREE *One Half*, THREE, TWO *One Half*, TWO, ONE *One Half*, ONE, and 1-8th, 2-8ths, 3-8ths, 4-8ths, 5-8ths, 6-8ths, 7-8ths per cent. thereby making it uſeful to every ſpecies of COMMISSION BUSINESS, FACTORAGE, EXCHANGE, STOCK BROKERAGE, and every other profeſſion, in a manner different from any thing of the kind hitherto publiſhed, and conſequently an advantage no Intereſt Book at preſent can ſhew.

The Intereſt for any time, from one year to one day, on any ſum, from *One* to *One Thouſand Pounds*, will appear progreſſively, and that the ſame may more readily be

found, the ſeveral principal ſums are inſerted in four different pages, thereby dividing the year, and parts of a year into ſixteen columns, and giving a ſum column to each page.

The Intereſt on any ſum, from *One Pound* to *One Thouſand Pounds*, is immediately ſeen at one view.

Example: Was the Intereſt on £. 794 required for three months, you have only to look in the column for £. 794 and under three months you will find £. 9 : 18 : 6 the intereſt required.

Odd Shillings are not noticed in the Table, becauſe their Intereſt is readily ſupplied, at the rate of a farthing a month for every five ſhillings.

The Intereſt on *Thouſands* is found as far as *Ten Thouſand*, which is ſufficiently high for general calculation; theſe will readily give the intereſt of any ſum, to any amount, by prefixing the intereſt of the thouſands to that of the inferior numbers, viz.

Find the Intereſt of £. 25,875 for four months, at 5 per cent.

The Intereſt	on £. 10,000 for four months, is	£.	166	13 4
	on £. 10,000 for ditto - - - -		166	13 4
	on £. 5000 for ditto - - - -		83	6 8
	on £. 850 for ditto - - - -		14	11 8
The Intereſt	on £. 25,875 for four months, is found to be -	£.	431	5 0

This example is ſufficient to ſhew that theſe Tables will anſwer for any ſum at 5 per cent. and *for any time*, for was the intereſt required for any number of years, and parts of a year, you have only to find the intereſt of one year on the given ſum, which multiply by the number of years, and then ſeek for the intereſt on the given ſum for the parts of a year required, and their total will be the anſwer.

Independent of the correctneſs of theſe TABLES, and the errors which they conſtantly prove to exiſt in all other calculations on intereſt, they boaſt the SUPERIOR ADVANTAGE of finding the intereſt at *every current rate*, by a ſhort operation, (of two minutes) on any ſum, and for any time; for was the intereſt required on the ſaid

ſum

ſum of £. 25,875 for four months at $3\frac{1}{2}$---and $1\frac{1}{2}$ per cent.---it is ſpeedily found as follows:

The Intereſt firſt found at 5 per cent. is £. 431 5 0 for the time, which ÷10 produces £. 43 : 2 : 5 as a *general Multiplicand.*

The ſaid £. 43 : 2 : 6 multiplied by 7 gives the intereſt at $3\frac{1}{2}$ per cent. and multiplied by 3, gives the intereſt at $1\frac{1}{2}$ per cent.

43	2	6		PROOF.	43	2	6
		7					3
301	17	6	Intereſt at $3\frac{1}{2}$ per cent.		129	7	6 Intereſt at $1\frac{1}{2}$ per cent.

The reaſon of theſe operations is given at the end of the Tables, and applied to every *current rate* of intereſt, which ready mode of calculating intereſt, at ALL RATES, cannot but prove of the greateſt utility in all Public Offices, Commiſſion Buſineſs, EXCHANGES, FACTORAGE, STOCK BROKAGE, &c. and to all other perſons who have any concerns in Intereſt Accounts, or any Commercial Tranſactions.

The errors in the common Intereſt Books, being proved in the preceding pages to ariſe only from the Intereſt *on the broken parts of a month*; an EXTRACT of the Intereſt on the progreſſive days in a month, *is taken from one of them*, and given as an Addenda, or Poſtcript, that the reader may, by comparing the ſaid Extract to the preſent Tables, more readily diſcover the defects, which have ſo many years exiſted; and alſo, with greater facility examine the truth of all the calculations in the Introduction, and the comparative Statement of the Account Current.

RULES for finding the Intereſt of any Sum for any Time, and *at any* RATE, by means of the preceding TABLES.

FIRST, find the Intereſt of the given Sum, for the given Time, at 5 per Cent. by the Tables, and the Intereſt ſo found, *always* divide by TEN, and multiply the *Quotient* of ſuch Diviſion by *one* of the following Numbers, which will give the Amount at the different Rates of Intereſt herein after-mentioned, viz.

Multiply by	12	to find the Intereſt at	6
	11	ditto	5 *one half*
	9	ditto	4 *one half*
	8	ditto	4
	7	ditto	3 *one half*
	6	ditto	3
	5	ditto	2 *one half*
	4	ditto	2
	3	ditto	1 *one half*
	2	ditto	1

} per Cent. per Annum.

EXAMPLES *of the Truth of the above* RULE.

Suppoſe it was required to find the Intereſt of £. 765 : 0 : 0 for 8 Months and 3 Weeks, at 3 *one half* per Cent. per Annum: You find in the Tables the Intereſt at 5 per Cent. to be £. 27 : 17 : 9¼, which divided by *ten*, viz.

10(27 17 9¼

Produces	£.	2	15	9¼	5-10ths *Quotient.*
Multiply by				7	
Anſwer at £. 3½ per Cent.	£.	19	10	5½	taking 3 Farthings for Fractions.

In further Proof of the Truth of the above Method, find the Intereſt of £.955 : 0 : 0 for 8 Months, at the ſeveral RATES of Intereſt above-mentioned.

It appears by the Tables, that the Intereſt of £. 955 : 0 : 0 for 8 Months, *is* £. 31 : 16 : 8, which divided by TEN, gives a *Quotient* £. 3 : 3 : 8 for a general *Multiplicand*, the Quotient being thus prepared.

£. s. d.		£. s. d.		
If 3 3 8 is multiplied by	12	it produces 38 4 0	Int. for 8 Months at	6 per Cent.
	11	35 0 4	ditto	5 *one half*
	9	28 13 0	ditto	4 *one half*
	8	25 9 4	ditto	4 *per Cent.*
	7	22 5 8	ditto	3 *one half*
	6	19 2 0	ditto	3 *per Cent.*
	5	15 18 4	ditto	2 *one half*
	4	12 14 8	ditto	2 *per Cent.*
	3	9 11 0	ditto	1 *one half*
	2	6 7 4	ditto	1 *per Cent.*

Thus, in an eaſy, conciſe, and expeditious Manner, theſe TABLES *will give an* INTEREST *for any* SUM, *at any* TIME, *and at any* RATE, *in a Method never before introduced in any* PUBLICATION *on the* SUBJECT.

Having given the Method of finding Intereſt per Centum to ONE *per Cent.* incluſive, it next follows to ſhew, by means of theſe Tables, the Method of finding Intereſt when *the Fractional Parts of a Pound are made the* RATE.

RULE.

Find, as before, the Intereſt of the given Sum for the given Time, and divide the Intereſt ſo found, firſt by TEN, and that Quotient by FOUR, then multiply the laſt *Quotient* by one of the following Numbers, which will give the Amount, at the ſeveral *Fractional Rates* herein after-mentioned, viz.

Multiply by 7	to find Intereſt at	7-8ths *per Cent.*
6	ditto	6-8ths or $\frac{3}{4}$ *per Cent.*
5	ditto	5-8ths *per Cent.*
4	ditto	4-8ths or $\frac{1}{2}$ *per Cent.*
3	ditto	3-8ths *per Cent.*
2	ditto	2-8ths or $\frac{1}{4}$ *per Cent.*
1	ditto	1-8th *per Cent.*

Example

Examples of the Truth of the *preceding* RULE.

Suppoſe it was required to find the Intereſt of £. 670 : 0 : 0 for 9 Months, at 5-8ths per *Centum* per *Annum*.

The Intereſt on the above Sum for 9 Months, by the Tables is £. 25 : 2 : 6, which divide *firſt* by *Ten*, viz. £. 26 2 6

ſecond by *Four*	2 10 6	*firſt Quotient.*
Produces	0 12 6¼	*the ſecond Quotient, or Multiplicand.*
Then for 5-8th per Cent. multiply by	5	
Anſwer at 5-8ths per Cent.	£. 3 2 9¼	

By this Method any Sum, at any Time, may be found at any of the *Fractional* RATES before-mentioned, viz.

Find the Intereſt of £. 955 : 0 : 0 for 8 Months, at the ſeveral *Fractional Rates* of Intereſt before given.

It appears by the Tables, that the Intereſt of £. 955 : 0 : 0 for 8 Months, is £. 31 : 16 : 8, which divided by *Ten* gives a *firſt Quotient* of £. 3 : 3 : 8, which divided by *Four*, gives a *Second Quotient* of £. 0 : 15 : 11 for a *general Multiplicand*.

This being prepared, if the ſaid £. 0 : 15 : 11 is multiplied by

7	it produces £. 5 11 5	Intereſt for 8 Months, at	7-8ths *per Cent.*
6	4 15 6	ditto	6-8ths ditto
5	3 19 7	ditto	5-8ths ditto
4	3 3 8	ditto	4-8ths ditto
3	2 7 9	ditto	3-8ths ditto
2	1 11 10	ditto	2-8ths ditto
1	0 15 11	ditto	1-8th ditto

Intereſt at ½, ¼, or ¾ per Cent. is more readily found, by dividing the Intereſt from the Tables by TEN, which will always give the Amount at *half* per Cent. which divided by 2, gives it at *one fourth*, and the two Sums united, will give the Intereſt at *three fourths* per Cent.

Thus, if £. 31 16 8 the Int. on £. 955 for 8 months ÷ 10 produces 3 3 Int. at ½
3 3 8 the Int. at half per Cent. ÷ 2 1 11 10 at ¼ } Per Cent.
The two Sums added together make £. 4 15 6 Int. ¾ }

To

To the READER.

FROM what has been demonſtrated in the Progreſs of this Work, it muſt be ſeen, that the Table of Days, in the common Intereſt Books, cannot be uſed with any certainty, even when the Intereſt for Days is conſidered only in the *Abſtract*, for the Anſwer will ever be found ſhort of the true Amount; becauſe, in thoſe Computations, the dividend is always defective, and until third Terms can be formed, which will make each Day in the Year *aliquot* to 365, or nearly ſo, *a true Anſwer can never be produced*; and even in ſuch, their moſt perfect State, they could only be uſed to find the Intereſt for Days, *ſimply* and *independently* conſidered, for they could not be compounded with *Months* or *Weeks*, not being analogous to either; therefore, whenever Intereſt is ſought for in a Table of *Months*, and the Tranſition immediately made to that of *Days*, (which is the common Practice of the Counting-houſe) *the Solution will conſtantly be* FALSE: Theſe Facts, and their Cauſes, are ſo clearly demonſtrated in the *Introduction*, that every Reader muſt be ſatisfied of the Improprieties and Abſurdities contained in the common Intereſt Books, unleſs he is previouſly determined *not to be* CONVINCED.

W. WALLACE.

*** In the Obſervations preceding theſe Tables, an Extract of the Intereſt on Days, for one Month, from ſome of the common Intereſt Books, is mentioned to be given as a Poſtſcript, that an immediate Opportunity might thereby be had of comparing the Differences in the two Calculations; but as thoſe Books are various, and every Perſon ſuppoſed partial to that in his immediate Poſſeſſion, it was thought moſt eligible for the Reader to make References to his own Author.
